

CHALLENGE

The project proposal involved designing a 21st century high school environment focused on collaborative learning preparing students for their collegiate future.

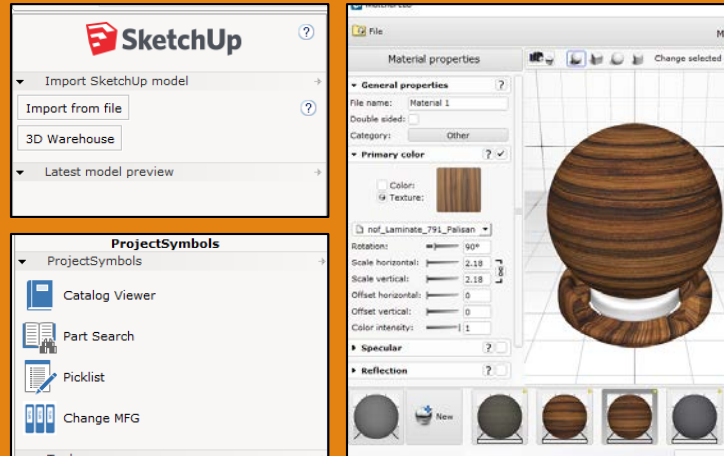

The design proposal was part of a large district bid and collective effort to transform learning environments for future leaders.

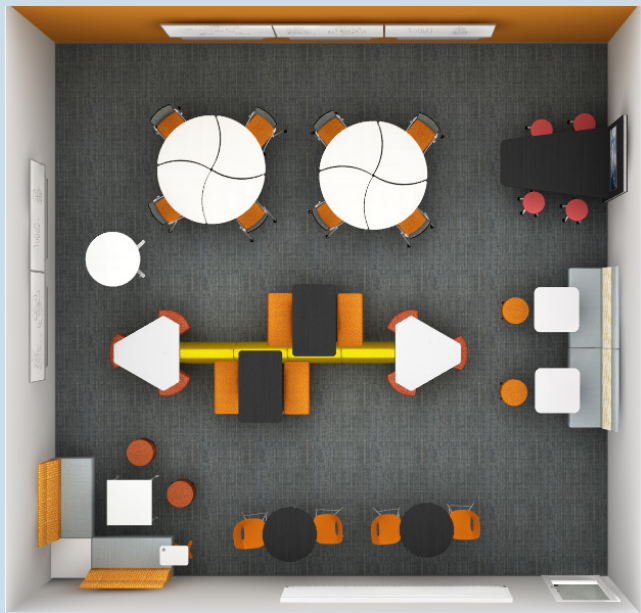

Given basic guidelines on class size, architectural finish selections, and conceptual direction to “be creative and create learning spaces of tomorrow”, the design team set forth to provide a cutting edge solution using CET Designer as the vehicle to visually communicate.

PROPOSE

CET allowed for full scale design execution; including aligning the district vision with the architectural backdrop. Finishes, architectural details, and furnishings were able to be realistically demonstrating using the key tools in CET Designer.

ENGAGE

During the client interview process, we were able to fully engage the panel with the design proposal accompanied with CET demonstrations of in the moment revisions as well as virtual reality panoramas with Yulio and VR goggles.

OUTCOME

CET Designer allowed the client to experience an interactive collaborative design approach which ultimately set MeTEOR Education's capabilities above competition. MeTEOR was awarded a 2019 school project as a result!
