

7.5 patch Catalogue Tools Release Notes

Updates and Fixes in Catalogue Tools 7.5.17

New features/updates of Catalogue Creator

- **[Null] Referencing catalog you do not have permission for.**

The error message with no catalog information has been resolved. The message will still be shown for catalog object with information that is not found when loading old drawing.

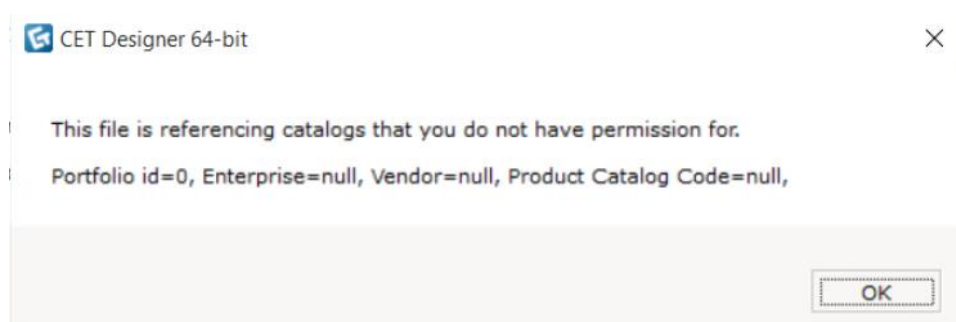

Image 1 : Resolved : Error message that does not show catalog information.

- **Fixed copy and pasting currency**

The pasting of price with currency separator issue is fixed. You can now copy and paste price from any documents with currency symbols and separators and it will still work.

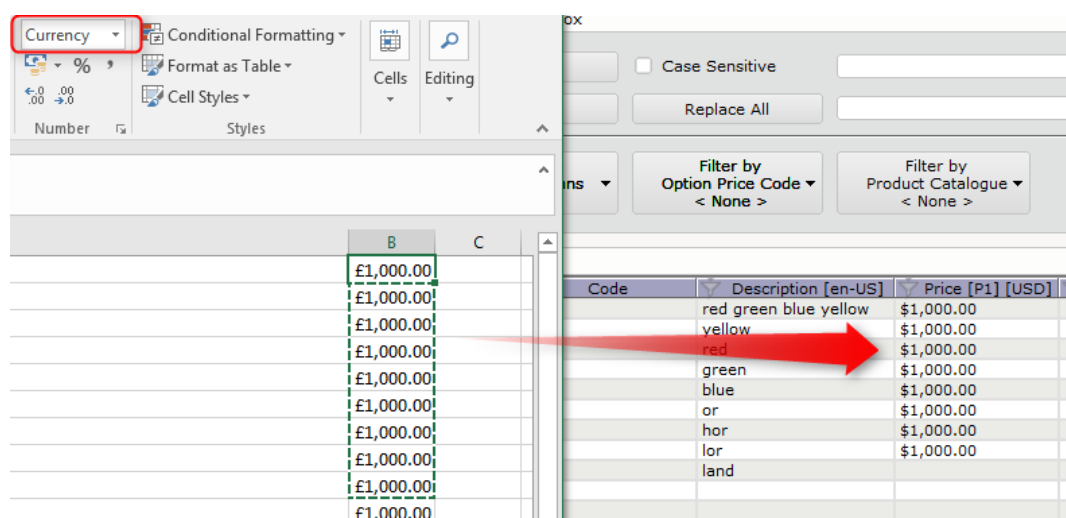

Image 2 : Pasting price information with currency format from excel.

- **Saving database from creator**
Table of Content for the project file is now precompiled for a faster load time.
- **Price codes now accepts ‘:’ in code.**
- **Updated filters**
Filters in Geometry tab, Connector dialog and Features now change to have filter option “Must Contain” and “Must not Contain”.
- **Fixed crash when switching languages.**
- **Faster response time when switching filter selection in toolbox.**
This feature works well with large catalogue.

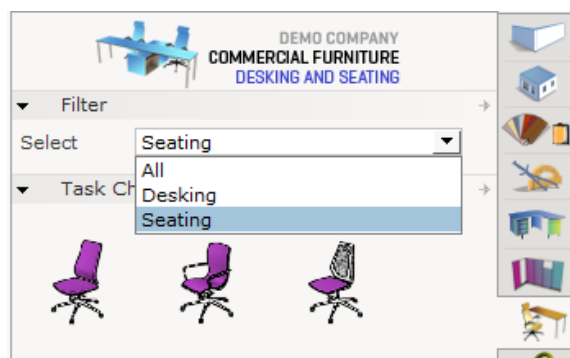

Image 3 : Faster switching time using large catalogue.

New features/updates of Catalogue Browser

- **Improved search in browser search field for installed catalogues.**
Refine your search in browser by using AND, OR, NOT operators.

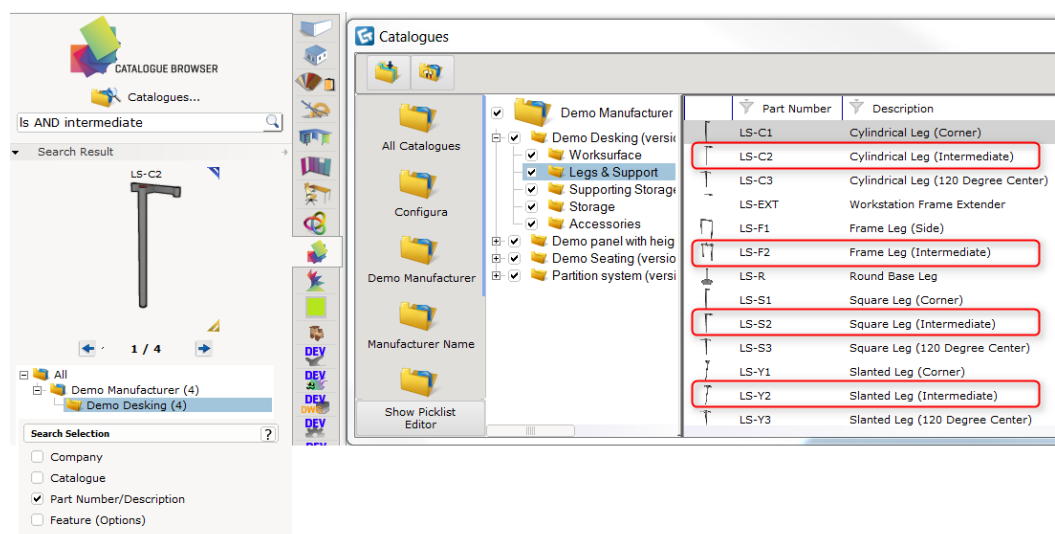

Image 4 : Refine search with AND operator.

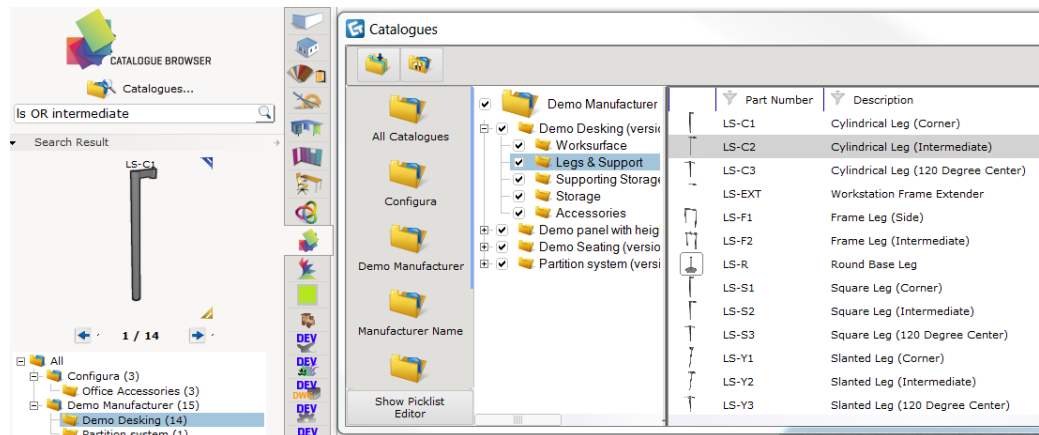

Image 5: Refine search with OR operator.

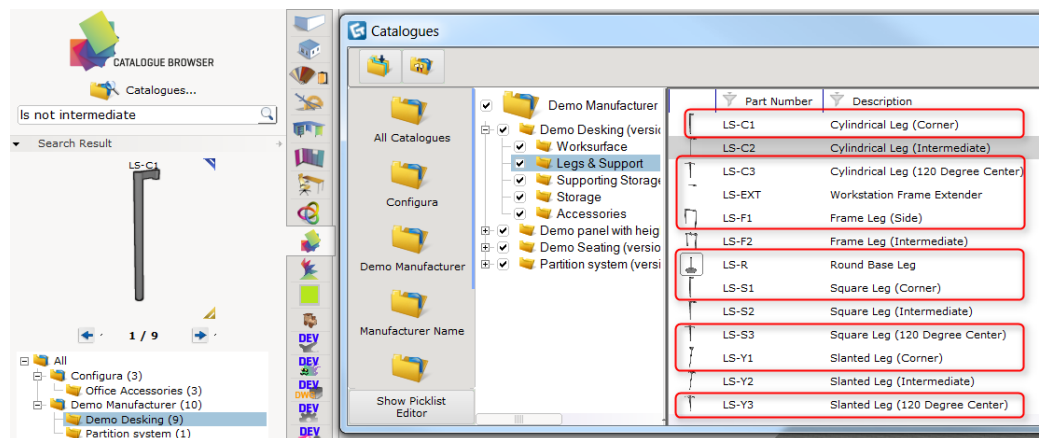

Image 6 : Refine search with NOT operator.

- Search option description now removed

Turn on Feature if you want to search for feature and option description or turn on Part Number/Description to search for product description and part number.

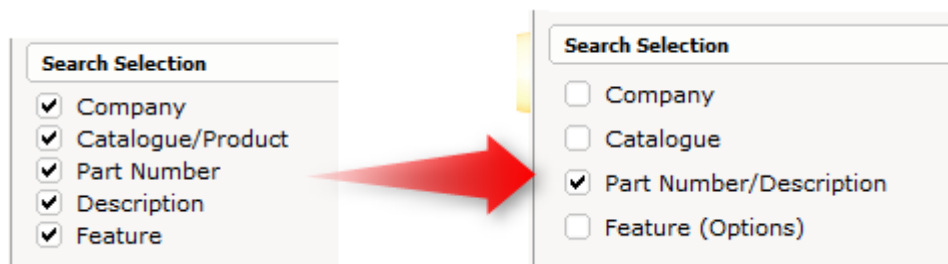

Image 7 : Improvement of catalogue UI – removing option Description from search selection and splitting product from catalogue.
