

Catalogue Tools 8.5 hotfix 2 • Release Notes

22 December 2017

Bug and Crash Fixes

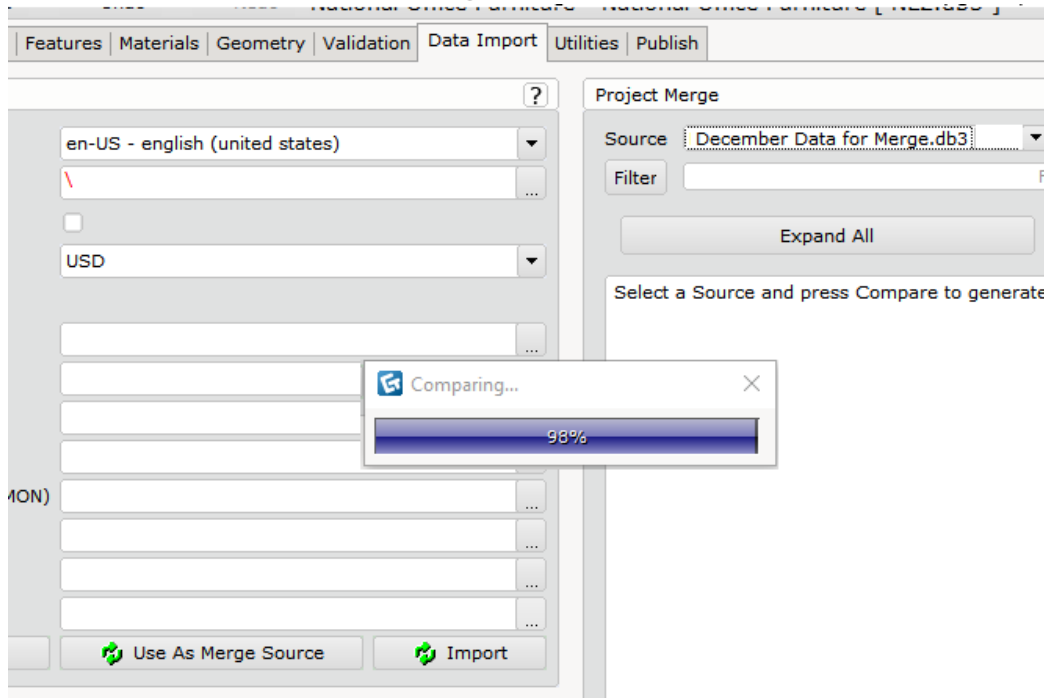

Fixed generating thumbnails for products with “/” character.

- Previously, generated thumbnail file names that is based on the product code with unsupported characters (/) will be converted by Windows to the underscore (_) character as the new file name.
- This has caused the **Match Preview Images to Products** button to not work since the product code or part number and the file name do not match.
- This has been fixed by asking Creator to look for file name with underscore character if unsupported character is used as product code.

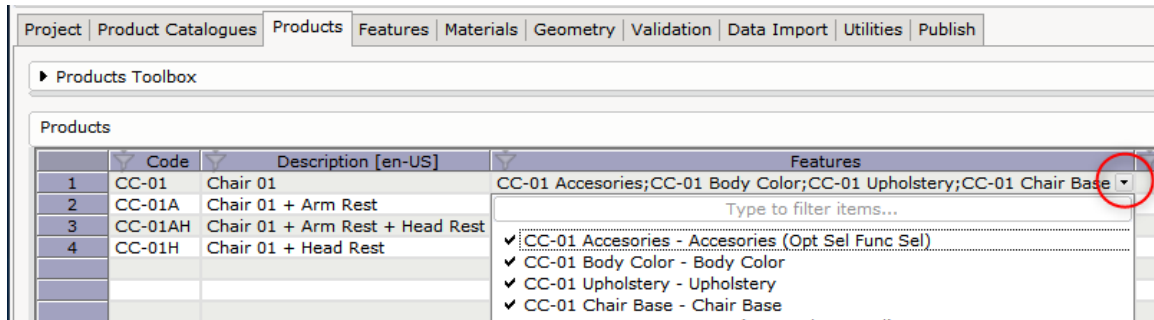

Fixed comparison and merging performance in Data Import card.

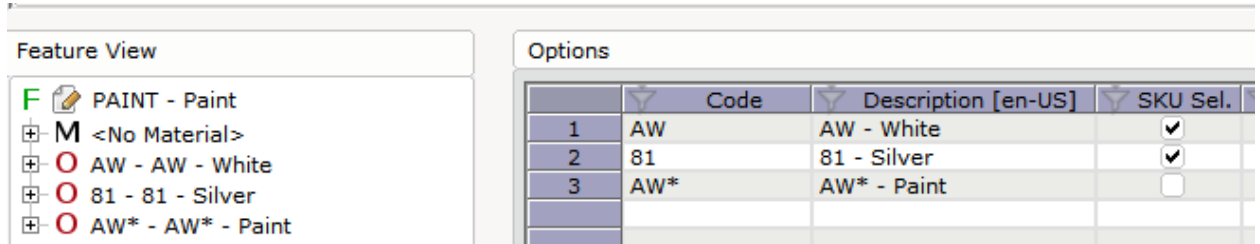

- Process goes from hours to minutes. 😊

- Fixed crash when click on feature column in **Products** card.

- Fixed db3 project file not save the SKU select changes.

- Fixed merged catalogue not saved.
- Fixed crash when loading specific XML.
