

Release Notes Configura 9.5.1

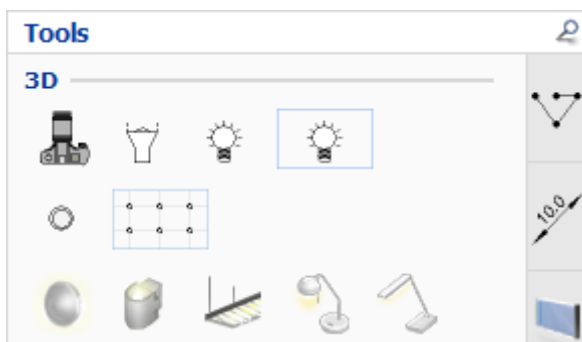

February, 2019

News & Changes

This minor release primarily contains lighting and rendering updates which we hope will be useful for creating even better and more photorealistic renderings!

A new set of lights, a couple of which can be seen in the rendering above, are now available in the **Tools** component tab:

After placing a light in the drawing, right-click it to modify the settings in terms of brightness, height etc.

The post processing have also seen a couple of small updates. The default filter is now called **Original**, and Exposure replaces Photographic as the default tone mapping.
